

Array

An array is a collection of elements of the same type.

arr \rightarrow { 3, 1, 5 } \rightarrow 1D

arr[2] \Rightarrow [6, 8, 9]

arr[2][0] \Rightarrow 6

$\left\{ \begin{array}{l} 1D \rightarrow \text{int[]} \text{ arr} = \text{new int}[5]; \\ 2D \rightarrow \text{int}[][] \text{ arr} = \text{new int}[3][3]; \end{array} \right.$

size \rightarrow
 name of array \rightarrow
 row \rightarrow
 col \rightarrow

```
public class Main {
    public static void main(String[] args) {
```

```
int[][] arr = new int[3][4];
```

```
System.out.println(arr);
```

```
System.out.println(arr[0]);
```

```
System.out.println(arr[0][1]);
```

```
int[][] other = arr;
```

```
System.out.println(other);
```

```
int row = arr.length;
```

```
System.out.println(row);
```

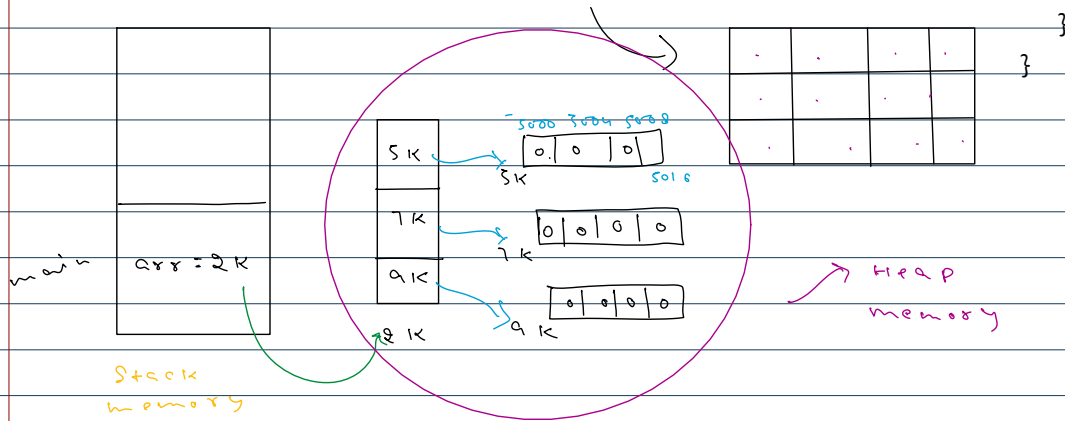

1D \rightarrow int[] arr = { 3, 1, 4 };

2D \rightarrow int[][] arr = {
 { 1, 2, 3 },
 { 4, 5, 6 },
 { 7, 8, 9 }
 };

2D array contiguous memory allocation ?

```
int[][] arr = new int[5][4];
```

```
int col = arr[0].length;
System.out.println(col);
```

```
int[][] arr = new int[n][m];
```

$n+1$:- Total no. of 1D array.

Output of a 2D array

$n: 2$
 $m: 3$

5	8	9
0	7	3

0 0	0 1	0 2
1 0	1 1	1 2

row wise

col wise

$n: 2$
 $m: 3$

5	8	9
0	7	3

0 0	0 1	0 2
1 0	1 1	1 2

Transpose of a matrix

arr[i][j] → (i,j) ⇒ (j,i)

Transpose the matrix in-place

5 2 7
6 3 8
8 4 9

lower triangular matrix → 1 0, 2 0, 2 1

↪ i > j

```
public class Main {
    public static void main(String[] args) {
```

```
int[][] arr = {  
    {5, 8, 9},  
    {0, 7, 3},  
    {1, 7, 9}  
};
```

```
int rows = arr.length;  
int cols = arr[0].length;
```

```
for(int i=0; i<rows; i++){  
    for(int j=0; j<cols; j++){  
        System.out.print(i+" "+j+" ");  
    }  
    System.out.println();  
}
```

```
System.out.println("*****");
```

```
for(int i=0; i<rows; i++){  
    for(int j=0; j<cols; j++){  
        System.out.print(arr[i][j]+" ");  
    }  
    System.out.println();  
}
```

```
System.out.println("*****");
```

```
for(int i=0; i<cols; i++){  
    for(int j=0; j<rows; j++){  
        System.out.print(j+" "+i+" ");  
    }  
    System.out.println();  
}
```

```
System.out.println("*****");
```

```
for(int i=0; i<cols; i++){  
    for(int j=0; j<rows; j++){  
        System.out.print(arr[j][i]+" ");  
    }  
    System.out.println();  
}
```

```
System.out.println("*****");
```

```
for(int i=0; i<rows; i++){  
    for(int j=0; j<cols; j++){  
        System.out.print(arr[j][i]+" ");  
    }  
    System.out.println();  
}
```

```
}
```

```
for(int i=0; i<rows; i++){  
    for(int j=0; j<cols; j++){  
        if(i>j)  
            swap(arr, i, j);  
    }  
}
```

```
System.out.println("*****");
```

```
for(int i=0; i<rows; i++){  
    for(int j=0; j<cols; j++){  
        System.out.print(arr[i][j]+" ");  
    }  
    System.out.println();  
}
```

```
}
```

```
public static void swap(int[][] arr, int i, int j){  
    int temp = arr[i][j];  
    arr[i][j] = arr[j][i];  
    arr[j][i] = temp;  
}
```

```
}
```

Search in a 2D Matrix II

$n \rightarrow \text{row}$
 $m \rightarrow \text{col}$

Linear Search $\Rightarrow O(n * m)$

Binary Search on $\Rightarrow O(n \log m)$
